ABSTRACT

5673037063: Petroleum Technology Program

Chikezie Ndubuisi Nwaoha: CO₂ Absorption: Solubility of CO₂ in 2-Amino-2-Methyl-1-Propanol Solvent Promoted by Piperazine and Monoethanolamine Blends.

Thesis Advisors: Assoc. Prof. Chintana Saiwan, and Prof. Paitoon Tontiwachwuthikul 147 pp.

Keywords: Carbon dioxide solubility/ 2-amino-2-methyl-1-propanol/ Piperazine/ Absorption working capacity/ Monoethanolamine/ ProMax[®] 3.2/ Reboiler duty

This research work investigates the solubility data of carbon dioxide (CO₂) in a novel ternary blend of aqueous 2-amino-2-methyl-1-propanol (AMP) promoted by piperazine (PZ) and monoethanolamine (MEA) blends have been experimentally analysed at 20 °C, 40 °C, and 60 °C at CO₂ partial pressures between 2 kPa and 100 kPa. At 40 °C and 93.93 kPa CO₂ partial pressure, the concentrations of PZ and MEA promoters were varied between 0.5 M – 1 M and 2 M – 4 M, respectively, while the AMP concentration was kept at 2 M. The various concentrations of the ternary blend possessed superiority in both the equilibrium CO₂ loading (6.9 % to 19 %) and absorption working capacity (13.8 % to 48.3 %) compared to the conventional 5 M MEA. The effects of MEA and PZ concentrations, and H₂O-Amine molar ratio in terms of H₂O/PZ was also studied, and the solvent combination of 2 M AMP – 0.5 M PZ – 3 M MEA was selected for further equilibrium CO₂ loading analysis considering its very minimal potential of forming solid precipitates. The results were reported as a function of CO₂ partial pressures at the investigated temperatures. In addition, the energy penalty during regeneration was predicted using a validated ProMax[®] 3.2 CO₂ capture plant simulation. The simulation results indicated that the ternary blend solutions higher than 5 M had energy reductions between 5.3 % - 26.3 % compared to 5 M MEA (at the same condition).

บทคัดย่อ

ซิกเกะซี อวฮาร์: ค่าการละลายของแก๊สคาร์บอนไดออกไซด์ในตัวทำละลาย 2-อะมิโน-2-เมทิล-1-โพรพานอล กระตุ้นโดยสารผสมระหว่างไพเปอราซีนและมอนอเอทาโนลามีน (CO₂ Absorption: Solubility of CO₂ in 2-Amino-2-Methyl-1-Propanol Solvent Promoted by Piperazine and Monoethanolamine Blends) รศ.ดร. จินตนา สายวรรณ และ ศ.ดร. ไพฑูรย์ ตันติเวชวุฒิกุล

ในการวิจัยนี้ ได้มีการพิสูจน์ข้อมูลด้านการละลายของแก๊สคาร์บอนไดออกไซด์ ในสารละลายผสม 2-อะมิโน-2-เมทิล-1-โพรพานอล กระตุ้นโดยไพเปอราซีนและมอนอเอทาโนลามีน โดยการทดลองการวัดค่าการละลายดังกล่าวได้มีการวิเคราะห์ที่อุณหภูมิ 20 40 และ 60 องศาเซลเซียส ที่ความย่อยระหว่าง 2 กิโลพาสคัล และ 100 กิโลพาสคัล โดยแปรเปลี่ยนค่าความเข้มข้นของไพเปอราซีนที่ 0.5 - 1 โมลาร์ และมอนอเอทาโนลามีนที่ 2 - 4 โมลาร์ ในขณะที่ความเข้มข้นของ 2-อะมิโน-2-เมทิล-1-โพรพานอล อยู่ที่ 2 โมลาร์ ความเข้มข้นที่แปรเปลี่ยนไปของสารผสมทั้งสามทำให้ที่มีสมบัติบางประการที่ดีขึ้น เช่น ในเชิงสมบัติในการดักจับแก๊สคาร์บอนไดออกไซด์ (CO₂ loading) เพิ่มขึ้นจาก 6.9 เป็น 19 เปอร์เซ็นต์ และสมบัติความจุในการดูดซับ (absorption working capacity) เพิ่มขึ้นจาก 13.8 เป็น 48.3 เปอร์เซ็นต์ เมื่อเปรียบเทียบกับมอนอเอทาโนลามีน ที่ความเข้มข้น 5 โมลาร์ ในงานวิจัยนี้ ได้มีการศึกษาอิทธิพลของความเข้มข้นของมอนอเอทาโนลามีน และเพพทาลาซีนในอัตราส่วนระหว่างน้ำต่อไพเปอราซีนและน้ำต่อ 2-อะมิโน-2-เมทิล-1-โพรพานอล ที่มีผลต่อการเกิดตะกอนของของแข็ง ซึ่งผลปรากฏว่าความเข้มข้นของสารละลายผสมทั้งสามที่ 2 โมลาร์ของ 2-อะมิโน-2-เมทิล-1-โพรพานอล 0.5 โมลาร์ของไพเปอราซีนและ 3 โมลาร์ของมอนอเอทาโนลามีนถูกใช้เป็นตัวชี้วัดสมบัติในการดักจับแก๊สคาร์บอนไดออกไซด์ (CO₂ loading) เนื่องจาก ณ สภาวะดังกล่าวส่งผลต่อการตกตะกอนของของแข็งในระบบน้อยที่สุด ผลของงานวิจัยนี้ได้เสนอในรูปแบบของความดันย่อยของแก๊สคาร์บอนไดออกไซด์ที่อุณหภูมิที่ต่างๆ โปรแกรม โปรแมกซ์เวอร์ชัน 3.2 (ProMax[®] 3.2) ใช้ในการจำลองการดักจับแก๊สคาร์บอนไดออกไซด์เพื่อทำนายผลของพลังงานที่ต้องการใช้ในส่วนนำสารละลายผสมกลับมาใช้ใหม่ ผลในแง่ของแบบจำลองระบุว่าสารละลายผสมทั้งสามที่ความเข้มข้นมากกว่า 5 โมลาร์สามารถลดพลังงานในส่วนของการนำสารละลายกลับใช้ใหม่ได้ 5.3 ถึง 26.3 เปอร์เซ็นต์ เมื่อเปรียบเทียบกับความเข้มข้น 5 โมลาร์ของมอนอเอทาโนลามีนที่สภาวะเดียวกัน

ACKNOWLEDGEMENTS

First of all, I would like to thank my thesis advisors Assoc. Prof. Chintana Saiwan and Prof. Paitoon Tontiwachwuthikul for the great opportunity offered to me as a member of the research group and to learn about CO₂ capture using potential new solvent blends. I am also grateful to Dr. Teeradet Supap who was part of our research meetings for his valuable contributions from the start to finish of my research work. Without their support, it would have been near impossible to achieve all the experimental and simulation results presented in this work. Their follow-up and motivation in this research project is highly appreciated.

I am grateful for the partial scholarship and partial funding of the thesis work provided by the Petroleum and Petrochemical College.

My sincere appreciation also goes to some Engineers of Bryan Research and Engineering, USA (BR&E), licensors of ProMax[®] for their constant availability and constructive discussions during the period of simulation work: Mr. Martin D. Pieronek, Mr. Peter Krouskop and Mr. Jared Peterson.

I also thank Asst. Prof. Kitipat Siemanond, a member of my thesis committee for his participation and interest in appraising my research work.

I also wish to thank all my colleagues (MSc and PhD students) who contributed in one way or the other towards the achievement of this research work.

I also extend profound gratitude to all the staffs of the Petroleum and Petrochemical College for their entire support during the period of my studies and research.

Finally, my heartfelt thanks goes to my entire family members, my father Chief Edison Nwaoha, my mother Mrs. Josephine Nwaoha and step-mother Dame Eunice Nwaoha, my sisters Mrs. Chioma Nwofor and Mrs. Ijeoma Nwankwo, my brothers Mr. Kelechi Nwaoha and Dr. Iheanyi Nwaoha for their wonderful encouragement, love and prayers which sustained me during the tough periods of my studies and research work. I also extend my appreciation to my in-laws Prof. Okey Nwofor and Mr. Tochukwu Augustine Nwankwo for their backing and assistance.
